DIV. OF OIL, GAS & MINING

Dear Mr. Bown:

On February 3, 2003, this office sent you a letter requesting the immediate removal of two fuel tanks, four barrels of unknown petroleum products, and numerous buckets and gas cans that had been placed on your Enterprise mill site located in T. 13 N., R. 13 W., Section 31 (UMC 311612). None of these petroleum containers were listed in the Notice we received from you on January 30, 1995, and were therefore not authorized to be located within your mill site.

On February 7, 2003, we received your request to "revise" your Notice to include petroleum products and their containers. In order to amend your Notice to include these hazardous products, please submit the following information, or appropriate response, within 15 days of receipt of this letter:

1. Will the fuel tanks, barrels, buckets, gas cans, etc. containing petroleum products remain on-site permanently or will they be transported in and out of the mill site area on a seasonal basis?
2. If the containers are to be moved periodically, how often will this occur?
3. What are the precise quantities and types of each of the petroleum products you intend to store on the mill site? Please include such items as transmission fluid, grease, motor oil, etc. that are proposed to be stored at this location;
4. Because of the potential for leaks, spills and vandalism of the petroleum containers stored on-site, please provide your plan for a hazardous material containment structure which is constructed to hold at least 110% of the capacity of all of the fuel tanks, barrels, buckets, gas cans, etc.; and

5. Please provide a map showing the precise location where the fuel containment structure and associated petroleum products are to be located within the mill site.

Please be advised that upon acceptance of this amended Notice, no hazardous materials other than those listed by Bonneville Quarries, Inc. shall be stored or disposed of within the mill site area. Petroleum spills of one-half quart or more will need to be immediately cleaned up and properly disposed of. For larger spills, you must contact the Salt Lake Field Office within 24 hours of the event so that Bureau of Land Management (BLM) hazardous material clean-up policies and procedures are implemented. In addition, your reclamation bond must be adjusted to include the costs associated with removing the hazardous material containment structure(s) at the conclusion of operations at the mill site.

If you have any questions, or require additional information, please feel free to contact Michael Ford of my staff at (801) 977-4360.

Sincerely,

A handwritten signature in black ink, appearing to read "Brad D. Palmer".

Brad D. Palmer
Assistant Field Office Manager,
